CRISTÁCER

Nuestra cerámica, el alma de las personas que la crean

Our ceramics, the soul of the
people who create them

Nos céramiques, ce sont
aussi les personnes qui les
fabriquent

Unsere Keramik, die Seele der
Menscher, die sie schaffen

Construimos el futuro sobre la esencia de nuestro pasado

En Cristacer, llevamos desde 1987 creyendo en el poder de la cercanía, un valor que va más allá del diseño y la calidad de nuestra cerámica, y que nos ayuda a que nuestros clientes nos perciban como la empresa familiar y accesible que somos en cada parte del proceso de fabricación.

Ahora, sentimos que es el momento de un cambio; uno que ponga de manifiesto lo que somos a través de una nueva imagen que represente nuestra tradición y la cercanía con las personas, además de toda la innovación y la vanguardia que hay detrás de nuestra cerámica, y gracias a la que nos impulsamos cada día para ofrecer lo mejor a nuestros clientes. Porque en Cristacer sabemos que hay algo más importante que hacer cerámica, y es que nuestros clientes puedan disfrutarla.

1987

Building the future on the essence of our past

Since 1987, at Cristacer we have believed in the power of closeness. This is a value that goes beyond the design and quality of our ceramics. It helps our customers view us as the welcoming family business that we are in every part of the manufacturing process.

We now feel that it is time for a change. One that shows who we are through a new image that represents our tradition and closeness to people. And also the innovation and cutting-edge design behind our ceramics. Every day this drives us to offer the best to our customers.

Because at Cristacer we know that there is something more important than making ceramics: that our customers can enjoy them.

Nous bâtissons l'avenir à partir de l'essence de notre passé

Chez Cristacer, nous croyons depuis 1987 au pouvoir de la proximité, une valeur qui va au-delà du design et de la qualité de nos céramiques, grâce à laquelle nous sommes perçus par nos clients comme l'entreprise familiale et accessible et ce à chaque étape du processus de fabrication.

Aujourd'hui, nous pensons que le moment est venu de changer, de montrer ce que nous sommes à travers une nouvelle image qui représente notre tradition et notre proximité avec les gens, mais aussi toute l'innovation et l'avant-garde qu'offrent nos céramiques, celles qui nous motivent chaque jour à offrir le meilleur à nos clients.

Parce que chez Cristacer, nous savons qu'il y a quelque chose de plus important que de fabriquer de la céramique, et c'est que nos clients puissent en profiter.

Aufbau der Zukunft auf der Essenz unserer Vergangenheit

Bei Cristacer vertrauen wir seit 1987 auf die Kraft der Kundennähe, die über das Design und die Qualität unserer Keramik hinausgeht und dazu beiträgt, dass unsere Kunden uns in jedem Teil des Herstellungsprozesses als zugängliches Familienunternehmen wahrnehmen.

Wir haben das Gefühl, dass es nun Zeit für eine Veränderung ist, für ein neues Image, das zeigt, was wir sind. Ein Image, das unsere Tradition und Nähe zu den Menschen sowie all die Innovation und Avantgarde unserer Keramik repräsentiert und uns jeden Tag aufs Neue motiviert, unseren Kunden das Beste zu bieten.

Denn bei Cristacer wissen wir, dass es etwas Wichtigeres gibt als Keramik herzustellen: dass unsere Kunden Freude daran haben.

TEST STANDARDS

ISO 10545 - 2

Determination of dimensions

Sets for the methods for determining dimensional characteristics (length, width, thickness, straightness of sides, rectangularity and surface planarity).

ISO 10545 - 3

Determination of water absorption

Water absorption is a measure of the greater or lesser rate of porosity of the tile body. The test determines the amount absorbed by pieces after being submerged in boiling water for two hours. The rate of water absorption is expressed as a % with respect to the dry mass of pieces.

ISO 10545

Determination of bending strength

A tile's bending strength is determined by applying a force on the middle of the top side of the piece. The force applied is increased until the tile breaks. Bending strength is expressed in N / mm².

ISO 10545 - 7

Determination of the surface abrasion resistance of glazed tiles

The resistance of the glazed layer of tiles to abrasion is determined by applying a rotating abrasive load on the tile surface and visually inspecting pieces that have undergone testing against those that have not. Classification ranges from PEI 1 to 5.

In order to determine the suitability of ceramic floor tiles, their wear resistance must be known. This is influenced by not only the characteristics of tiles, but also by the place where they will be installed. The presence of abrasive materials (sand, gravel, etc.) and locations in areas with direct outdoor access are factors which shorten the lifespan of floor tiles.

Our floor tiles have been classified into five groups, which determine their resistance to abrasion and wear:

- **PEI 1:** Floor tiles exposed to light traffic, on which soft-soled footwear is used, free from abrasive products. Recommended in bedrooms and bathrooms in private homes, with no direct outside entry.
- **PEI 2:** Floor tiles exposed to average to light traffic, on which soft-soled footwear is used. Recommended for all rooms in single family homes except kitchens, entranceways, stairways and terraces.
- **PEI 3:** Floor tiles exposed to average to traffic, on which normal footwear is used. Recommended for all rooms in private homes and hotels, except for common areas such as stairways, entrances, etc.
- **PEI 4:** Floor tiles exposed to average to heavy traffic. Recommended for all types of single-family homes and multiunit dwellings, terraces, kitchens, business premises and offices. Not belonging to this group are all public places exposed to intense traffic such as tobacconists', new stands, bakeries, bar areas, public transport.
- **PEI 5:** Floor tiles adapted to highly intense traffic. Recommended in shopping centres, train/bus stations, airports, etc.

EN - 101

Surface hardness

Surface hardness determines the capacity of resistance of glazed surface to scratching. Tiles are classified on a scale of 1 to 10 based on the increasing hardness of the minerals used to scratch their surface. The MOHS hardness scale is as follows:

1 Talc	4 Fluorite	7 Quartz	10 Diamond
2 Gypsum	5 Apatite	8 Topaz	
3 Calcite	6 Feldspar	9 Corundum	

ISO 10545 - 11

Determination of crazing resistance

Determination of the resistance to the formation of fissures in the glazed layer by subjecting whole tiles to steam at a pressure of 5kg / cm² in an autoclave after which a dye is applied to the glazed layer and tiles are examined to detect possible fissures.

ISO 10545 - 12

Determination of frost resistance

This establishes a method whereby whole tiles are soaked in water and then undergo 100 freezing-thaw cycles, between 5° C and -5° C.

DIN - 51130

Determination of the critical slippage angle

Angle	Group
3° < a < 10°	R9
10° < a < 19°	R10
19° < a < 27°	R11
27° < a < 35°	R12
35° < a	R13

ISO 10545 - 8

Determination of linear thermal expansion

Determination of the linear thermal expansion coefficient for the interval between the ambient temperature and 100° C.

ISO 10545 - 13

Determination of the chemical resistance

This test determines the chemical resistance of tiles to cleaning agents, swimming pool additives, acid and alkalis, except for the hydrofluoric acid (HF) and its compounds.

The visual classification for cleaning agents and swimming pool additives is as follows:

- **GA** - When there is no visible effect (a slight change in colour is not considered as a chemical attack).
- **GB** - When appearance is modified.
- **GC** - When there is a partial or complete alteration of the original surface. The visual classification for acids and alkalis goes from GLA, GLB to GLC, depending on the degree of chemical resistance.
